

Guide to run the website (localhost)

1 – Install the Composer (<https://getcomposer.org/download/>)

2- Install the Laravel using the Compose with the command:

composer global require "laravel/installer"

Use the terminal or the prompt (windows).

3- You need to download the project.

You can do it github site or using command:

“git push <https://github.com/BrunoLambert/TripDiary.git>”

4- You will need to configure your DataBase. Open the file “.env” at the main folder.

You will need to change these 3 lines to your DB especifications:

DB_DATABASE=tripdaily

DB_USERNAME=root

DB_PASSWORD=

We are using a MySQL DataBase.

4- With all the files downloaded and the DataBase configured, you need to run the Laravel server. Open the Prompt(Windows) or the terminal (Linux) and browse to the folder you downloaded the project. You will have to create the tables at your DB acordding with the app first.

5- Run the command: “php artisan migrate”. Make sure that it creates the tables at your DB.

6- Now we run the server: “php artisan serve”.

7- Open your browser and enter “localhost:8000”. Then you will be redirected to the main page.
